RE: WASHINGTON UPDATE

Health Care Reform

The election of Republican Scott Brown to the Massachusetts Senate seat vacated by Ted Kennedy brings the total number of Republican Senators to 41, breaking the Democrats filibuster-proof majority; the repercussions include significant worry among Democrats from politically marginal districts and states. These developments, combined with an unemployment rate of over 10 percent, serious public concerns, and general issue fatigue, has forced health care reform to the back burner. While there is still talk, especially in the House, of the possibility of moving forward with a scaled down version of the Senate bill that was passed in December or possibly a new battery of legislation that would include some insurance reforms and other smaller provisions that were in the original House and Senate passed bills. For now, the focus of Congress and the Obama administration has shifted to job creation and economic recovery.

Section 215 of H.R. 3845 USA PATRIOT Amendments Act of 2009

HR. 3845 the USA PATRIOT Amendments Act of 2009 is a bill that originated in the House and contains Section 215, which places restrictions on how the government can collect information to from libraries to combat terrorism. H.R. 3845 was sent from the by the House Judiciary Committee on a bi-partisan vote of 16-10 to the Senate, where it was introduced by Senator Patrick Leahy (D-VT) and given a new bill number S. 1692. S. 1692 still includes Section 215 and was referred to the Senate Judiciary Committee. The Senate Judiciary Committee also filed a written report 111-92 that makes reference to Section 215.

• The Senate bill much like the House bill also includes stricter standards that the government must meet to wire tap or obtain library records.

• Feb. 28th is the deadline by which the bill must be reauthorized or the amendments, including Section 215, go away.

NIH Public Access policy:

As you already know the NIH Public Access Policy has two goals:

- The integration and accessibility of biomedical research will speed discoveries, resulting in the prevention of death and disability.
- Ensuring that the public has a right to have full access, without charge, to research findings supported by taxpayer dollars, after a reasonable period of embargo.

Last during the last session of congress the Fair Copyright in Research Works Act was introduced as a challenge to the policy.

- The bill would have prohibited any federal agency from imposing any condition, in connection with a funding agreement, that requires the transfer or license to or for a federal agency, or requires the absence or abandonment, of specified exclusive rights of a copyright owner in an extrinsic work.
- The legislation would have prohibited any federal agency from: (1) imposing, as a condition of a funding agreement, the waiver of, or assent to, any such prohibition; or (2) asserting any rights in material developed under any funding agreement that restrain or limit the acquisition or exercise of copyright rights in an extrinsic work.
- The bill did not move forward. We continue to monitor for similar legislation.

Health Information Technology:

On February 17, 2009, President Obama signed the Health Information Technology for Economic and Clinical Health (HITECH) Act, as part of the stimulus package (a.k.a. American Recovery and Reinvestment Act (ARRA)). The main goal of the HITECH Act is to encourage the adoption of electronic health records (EHRs) through incentive payments to physicians.

- Would require the government to take a leadership role to develop standards by 2010 that allow for the nationwide electronic exchange and use of health information to improve quality and coordination of care.
- The program invests \$20 billion in health information technology infrastructure and Medicare and Medicaid incentives to encourage doctors and hospitals to use HIT to electronically exchange patients' health information.
- Strengthens Federal privacy and security law to protect identifiable health information from misuse as the health care sector increases use of Health IT.
- As a result of this legislation, the Congressional Budget Office estimates that approximately 90 percent of doctors and 70 percent of hospitals will be using comprehensive electronic health records within the next 10 years.

RELATIONS COMMITTEE

FR: DALE DIRKS AND TERRELL BAPTISTE

RE: THE PRESIDENT'S FY 2011 BUDGET REQUEST

On February 1st, the Obama Administration submitted its fiscal year 2011 budget request to Congress. In an effort to address the nation's growing deficit, the budget recommends an overall freeze in non-defense discretionary spending. Within that category of spending however, the budget prioritizes programs at the Department of Health and Human Services, and the Department of Education. Other departments with discretionary programs experienced cuts.

While these funding recommendations represent the Administration's priorities, the President's budget is non-binding and serves primarily as a blueprint for Congress to consider as it crafts its own budget. Final FY11 funding levels will be determined by Congress through the annual appropriations bills.

Highlights of the president's FY11 budget request include:

- \$880.8 billion for the Department of Health and Human Services (HHS), an increase of \$80.5 billion over FY10.
- \$ 4 billion for the Food and Drug Administration (FDA), an increase of \$748 million over FY10 (this amount does not include user fees).
- \$7.5 billion for the Health Resources and Services Administration (HRSA), an increase of \$28 million from FY10.
- \$6.3 billion for the Centers for Disease Control and Prevention (CDC), a decrease of \$133 million below FY10.
- \$32.089 billion for the National Institutes of Health (NIH), an increase of \$1 billion over FY10.

- \$3.5 billion for the Substance Abuse and Mental Health Services Administration (SAMHSA), an increase of \$110 million over FY10.
- \$611 million for the Agency for Healthcare Research and Quality (AHRQ), an increase of \$214 million over FY10.
- \$77.8 billion for the Department of Education (DOE), an increase of \$18.6 billion over FY10.

Of specific interest to MLA/AAHSL, the president's FY 2011 budget request includes:

Health Resources and Services Administration

- \$7.5 billion for the Health Resources and Services Administration (HRSA), an increase of \$28 million from FY10.
 - \$11.6 million for the Telehealth program at HRSA, an increase of \$3.6 million over FY10.

National Institutes of Health

- o \$32.089 billion for the National Institutes of Health (NIH), an increase of \$1 billion over FY10.
- \$364.8 million for the National Library of Medicine, an increase of \$21million over FY10.
- \$1.22 billion for the Office of the NIH Director, an increase of \$43 million from FY10.
 - \$561 million for the NIH Common Fund, an increase of \$12 million over FY10.

Intramural Buildings and Facilities: A total of \$125 million is requested for NIH Intramural Buildings and Facilities (B&F) in FY 2011, a decrease of million below FY 2010, to sustain and improve the physical infrastructure used to carry out quality biomedical research on the NIH campuses.

• \$78 million for the Office of the National Coordinator for Health Information Technology, an increase of 17 million FY10.

Interoperability:

Interoperability is the ability of two or more systems to exchange information and to use the information that has been exchanged. This concept is fundamental to ONC's mission and necessary to attaining meaningful use of EHRs because, by statute, hospitals and health care professionals must exchange information to be considered meaningful users. Using Recovery Act funds, ONC is funding several major programs focused on interoperability:

- Identifying existing or develop new standards for EHRs that enable those products to meet interoperability requirements under meaningful use;
- Developing certification criteria and a certification process to ensure that EHRs have incorporated the necessary standards and implementation specifications to support interoperability required under definitions of meaningful use;
- Providing the core set of needed publicly accessible specifications, tools and services for the NHIN; and
- Building the nationwide capability for health information exchange through the State Health Information Exchange grant program, a program specifically funded under the Recovery Act.

Privacy and Security: Privacy and security is the foundation upon which trust in electronic health information and participation in health information exchange will be built. If individuals and health care professionals do not believe that their health information will be protected and remain confidential, the Nation will not achieve the level of participation in health information exchange that is needed to improve individual and population health. Bolstering trust by ensuring privacy and security is fundamental to ONC's mission and a basic priority for ONC. ONC's FY 2011 budget request will enable ONC to:

- Aggressively implement and enforce, in coordination with the Office for Civil Rights (OCR), new authorities and program related to privacy and security under HITECH;
- Provide hospitals and health care professionals with best practices and guidance on developing, implementing and maintaining organizational privacy and security policies;
- Identify opportunities to improve the current privacy and security legislation framework:
- Continue the security initiative started with Recovery Act funds; and
- Study medical identity theft and risk mitigation.

Institute of Museum and Library Services

• \$265.869 million for the Institute of Museum and Library Services, an increase of \$300 thousand over FY10.

EPA Library System

• \$105 million for IT/Data Management/Security, an increase of \$680 thousand more than the FY10 level.

Program Description and Accomplishments

As this nation moves to expand access to health care services, addressing the shortages of personnel and services in both urban underserved and rural communities is critical if such reform is to succeed. HRSA's Telehealth programs provide important tools for addressing these shortages. Telehealth is the use of electronic information and telecommunications technologies to support clinical healthcare, patient and professional health-related education, public health, and health administration. Telemedicine, a subset of telehealth technologies, is defined as the use of telecommunications and information technologies to provide or support long-distance clinical care. Telemedicine and other Telehealth technologies are not products or ends in themselves, but the means to provide services at a distance and to overcome geographic, economic, and other social barriers to obtaining health care services. These technologies provide a mechanism to share scarce resources by bringing expertise and information to people, wherever and whenever it is appropriate to do so. Information may be in various forms -- audio, video, data, or text. In the end, the use of these technologies is often transformative, altering the way we provide services into a more efficient and effective system.

These programs are also an integral component of the "Improve Rural Healthcare" Initiative to expand the use of telecommunications technologies that increase the access to and quality of healthcare provided to rural populations. The Telehealth programs strengthen partnerships among rural healthcare providers, recruit and retain rural healthcare professionals, and modernize the healthcare infrastructure in rural areas.

Moreover, these programs are increasingly important in this nation's strategy to address, not only the maldistribution of health care personnel that has resulted in long-standing rural health care personnel shortages, but the nationwide shortage of health professionals that is seriously affecting the provision of health services in urban as well as rural communities. Nationwide, if current trends continue, without considering the impact of health reform, the shortage of primary care physicians alone will reach 40,000 in little more than 10 years, according to the American

Funding for NIH Roadmap for Medical Research and for the NIH Director's Bridge Awards is distributed by mechanism. Roadmap: (funding shown above).
Bridge Awards — FY 09: 270 awards \$91,250; FY 10: -0 -; FY 11 -0 -.
 Includes the B&F appropriation plus the following included in NCI — FY 09: \$7,920; FY 10: \$7,920; FY 11 \$7,840.
 Included in above mechanisms
 Included in NIDDK — FY 09: \$150,000; FY 10: \$150,000; FY 11: \$150,000.

Numbers of grants identified in FY 2010 and FY 2011 are estimates, and WILL change as applications are received and selected for funding.

FY 2011 Proposed Appropriation Language

NATIONAL INSTITUTES OF HEALTH

Buildings and Facilities

For the study of, construction of, renovation of, and acquisition of equipment for, facilities of or used by the National Institutes of Health, including the acquisition of real property, [\$100,000,000] \$125,581,000, to remain available until expended.

(Public Law 111-117, Consolidated Appropriations Act, 2010)

In summary, by balancing a broad range of investment criteria, the Office of Research Facilities manages its real property assets in a fashion that optimizes the support of NIH's dynamic research mission.

Overall Budget Policy

Table 1 is a summary of the funding for B&F from FY 2002 through FY 2011.

Table 1 - Summary of B&F Funding by Program Activity FY 2002 through FY 2011:

	Table 1 - Sulli	mary or bor	unaling by Fit	gram Activity F	Y 2002 throug	IIFT ZUII.

FY 2009 ARRA	428,000,000	0	0	72,000,000	0	0	500,000,000
FY 2010	16,000,000	16,000,000	0	68,000,000	0	0	100,000,000
FY 2011	0	17,500,000	0	108,081,000	0	0	125,581,000

1/ Includes funding provided through the HHS supplemental emergency appropriation for Physical Security Improvements (\$25,000,000) and for construction of a BSL-4 facility at the NIH Rocky Mountain Laboratories (\$66,500,000) 2/ Amount includes \$10,000,000 comparable adjustments for IC R&I projects.

Overall Budget Policy: The FY 2011 budget request for Buildings and Facilities is

\$125.581 million, an increase of \$25.581 million or 25.6 percent over the FY 2010

enacted level. This request provides funds for specific projects in two program areas:
Essential Safety and Regulatory Compliance and Repairs and Improvements. These programs and projects will help the NIH to fulfill its continuing commitment to sustain its facilities and improve the overall Condition Index (CI).

Table 2 - Summary of FY 2011 Request

Year	Construction	Essential Safety and Regulatory Compliance	Repairs and Improvements	Renovations	Equipment/ Systems/ Enabling	Total
FY 2011	0	17,500,000	108,081,000	0	0	125,581,000

FY 2011 Online Performance Appendix

Full Cost Table

ONC estimates allocated budgetary resources by HHS strategic objective by attributing funds based on programmatic focus. Overhead costs such as administrative management, personnel, and other infrastructure and related expenses are estimated across programs based on the number of staff supporting the programs.

ONC's entire budget is related to HIT and the overarching goal is to increase adoption of HIT among physicians. Therefore, the entire budget is attributed to this performance measure.

Full Cost Table for ONC
(Budgetary Resources in Millions)

HHS Strategic Goals and Objectives	FY 2009	FY 2010	FY 2011
1: Health Care Improve the safety, quality, affordability and accessibility of health care, including behavioral health care and long-term care.	\$46,260	\$46,342	\$59.179
 Increase health care service availability and accessibility. 	\$16.970	\$17.000	\$21.709
1.3. Improve health care quality, safety and cost/value	\$29.290	\$29.342	\$37.470
2: Public Health Promotion and Protection, Disease Prevention, and Emergency Preparedness Prevent and control disease, injury, illness and disability across the lifespan, and protect the public from infectious, occupational, environmental and terrorist threats.	\$13,975	\$14.000	\$17. 87 8
2.1. Prevent the spread of infectious diseases.	\$5.989	\$6.000	\$7.662
2.3. Promote and encourage preventive health care, including mental health, lifelong healthy behaviors and recovery.	\$2.995	\$3.000	\$3.831
2.4. Prepare for and respond to natural and man-made disasters.	\$4.991	\$5.000	\$6.385
4: Scientific Research and Development Advance scientific and biomedical research and development related to health and human services	\$0.996	\$1.000	\$1.277
 4.4. Communicate and transfer research results into clinical, public health and human service practice. 	\$0.996	\$1.000	\$1.277
Trate)	\$61.231	\$61.342	\$78,334
