Journal Article Tag Suite Conference

November 1-2, 2010
Natcher Conference Center (Bldg 45) on
the NIH Campus in Bethesda, MD

JATS-Con is the first of what we hope will be an annual series of conferences for users of the [Journal Article Tag Suite](#), that is, users of any of the NLM DTDs. JATS-Con is a peer-reviewed conference with a broad range of content on the Tag Suite from the technical to publishing theory — and the latest news on the Tag Suite.

Who should attend?

Anyone who is using or planning to use one of the "NLM DTDs" or a variation of the DTDs to publish, author, archive, or interchange journal articles or other documents. We are expecting a mix of publishers, XML developers, tool builders, and librarians for the first meeting.

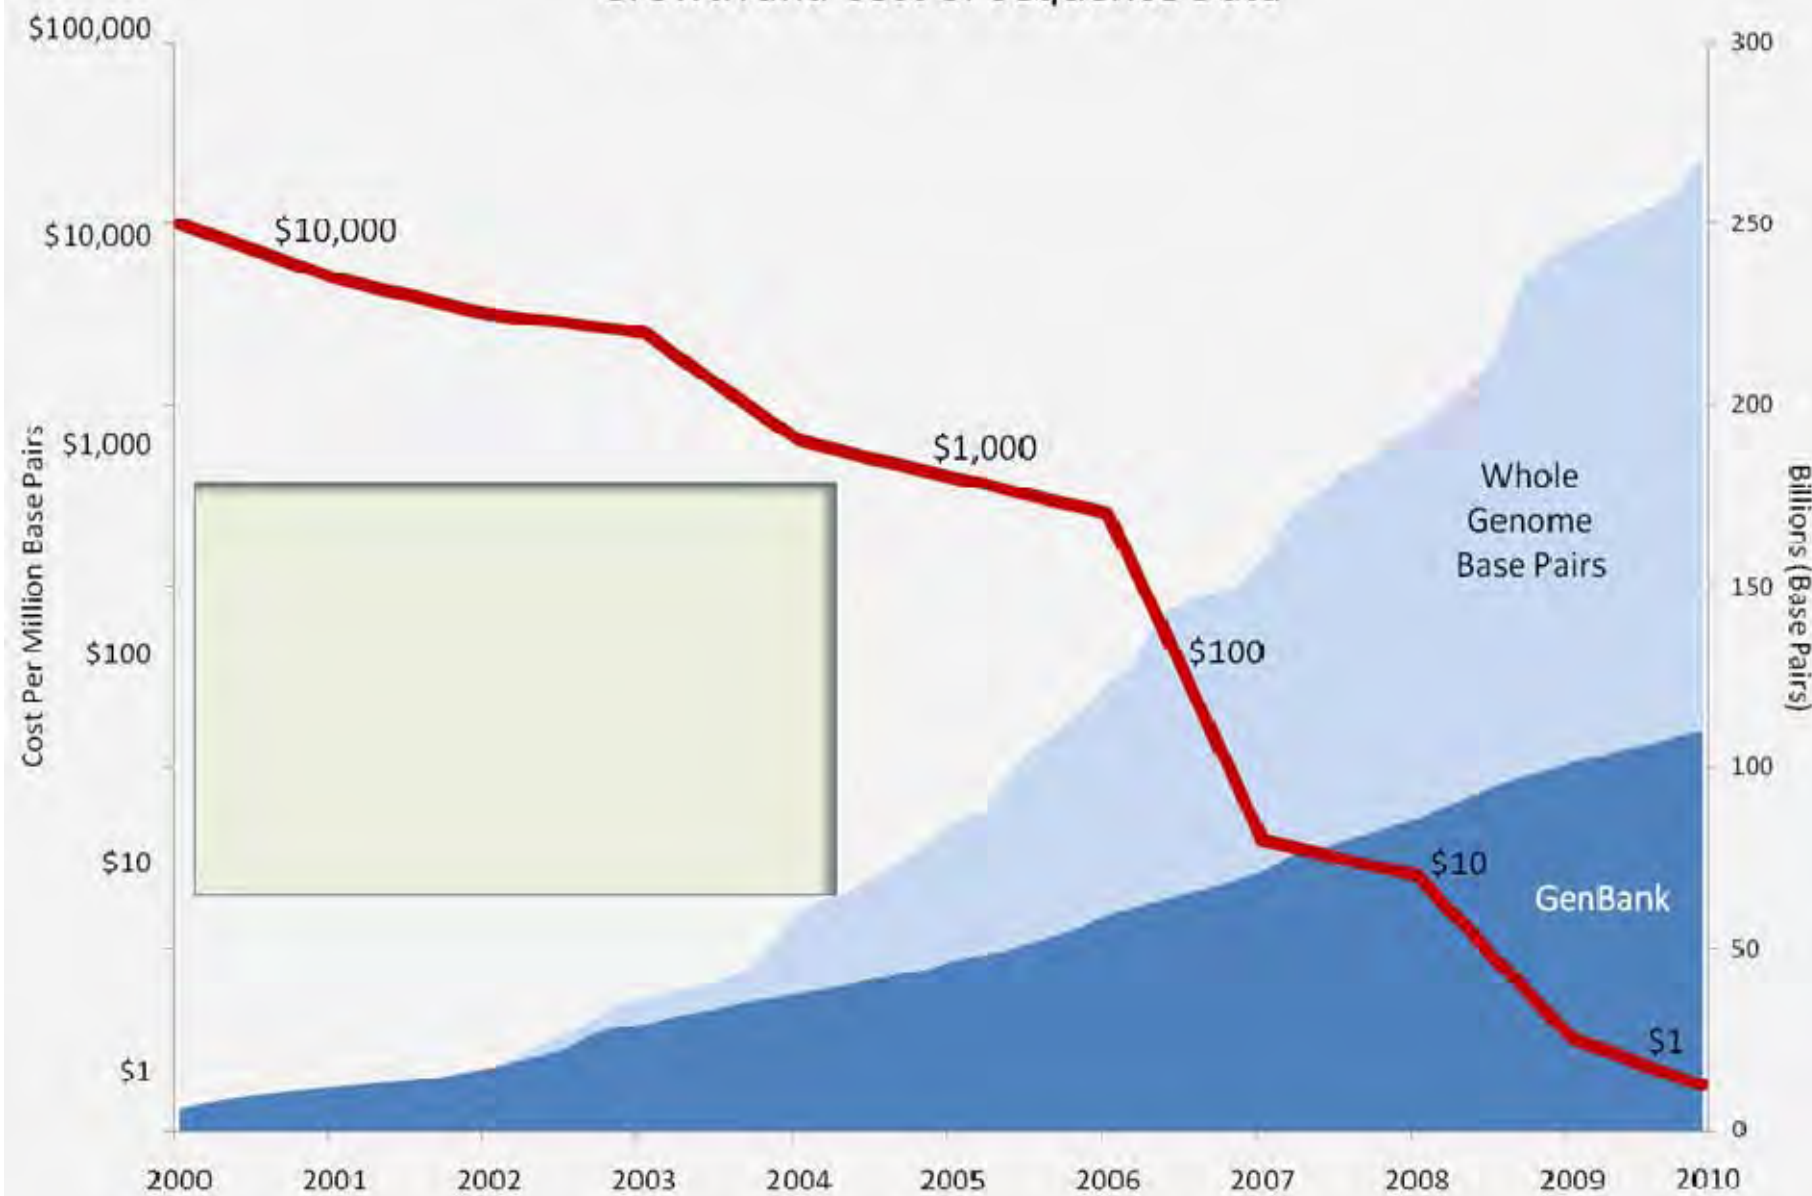

JATS-Con is hosted by the National Center for Biotechnology Information (NCBI) at the National Library of Medicine on the National Institutes of Health Campus in Bethesda MD. See <http://www.nih.gov/about/visitor/index.htm> for information on visiting the NIH Campus. Please note that as of October 1, 2008, the use of all tobacco products is prohibited on the NIH Campus.

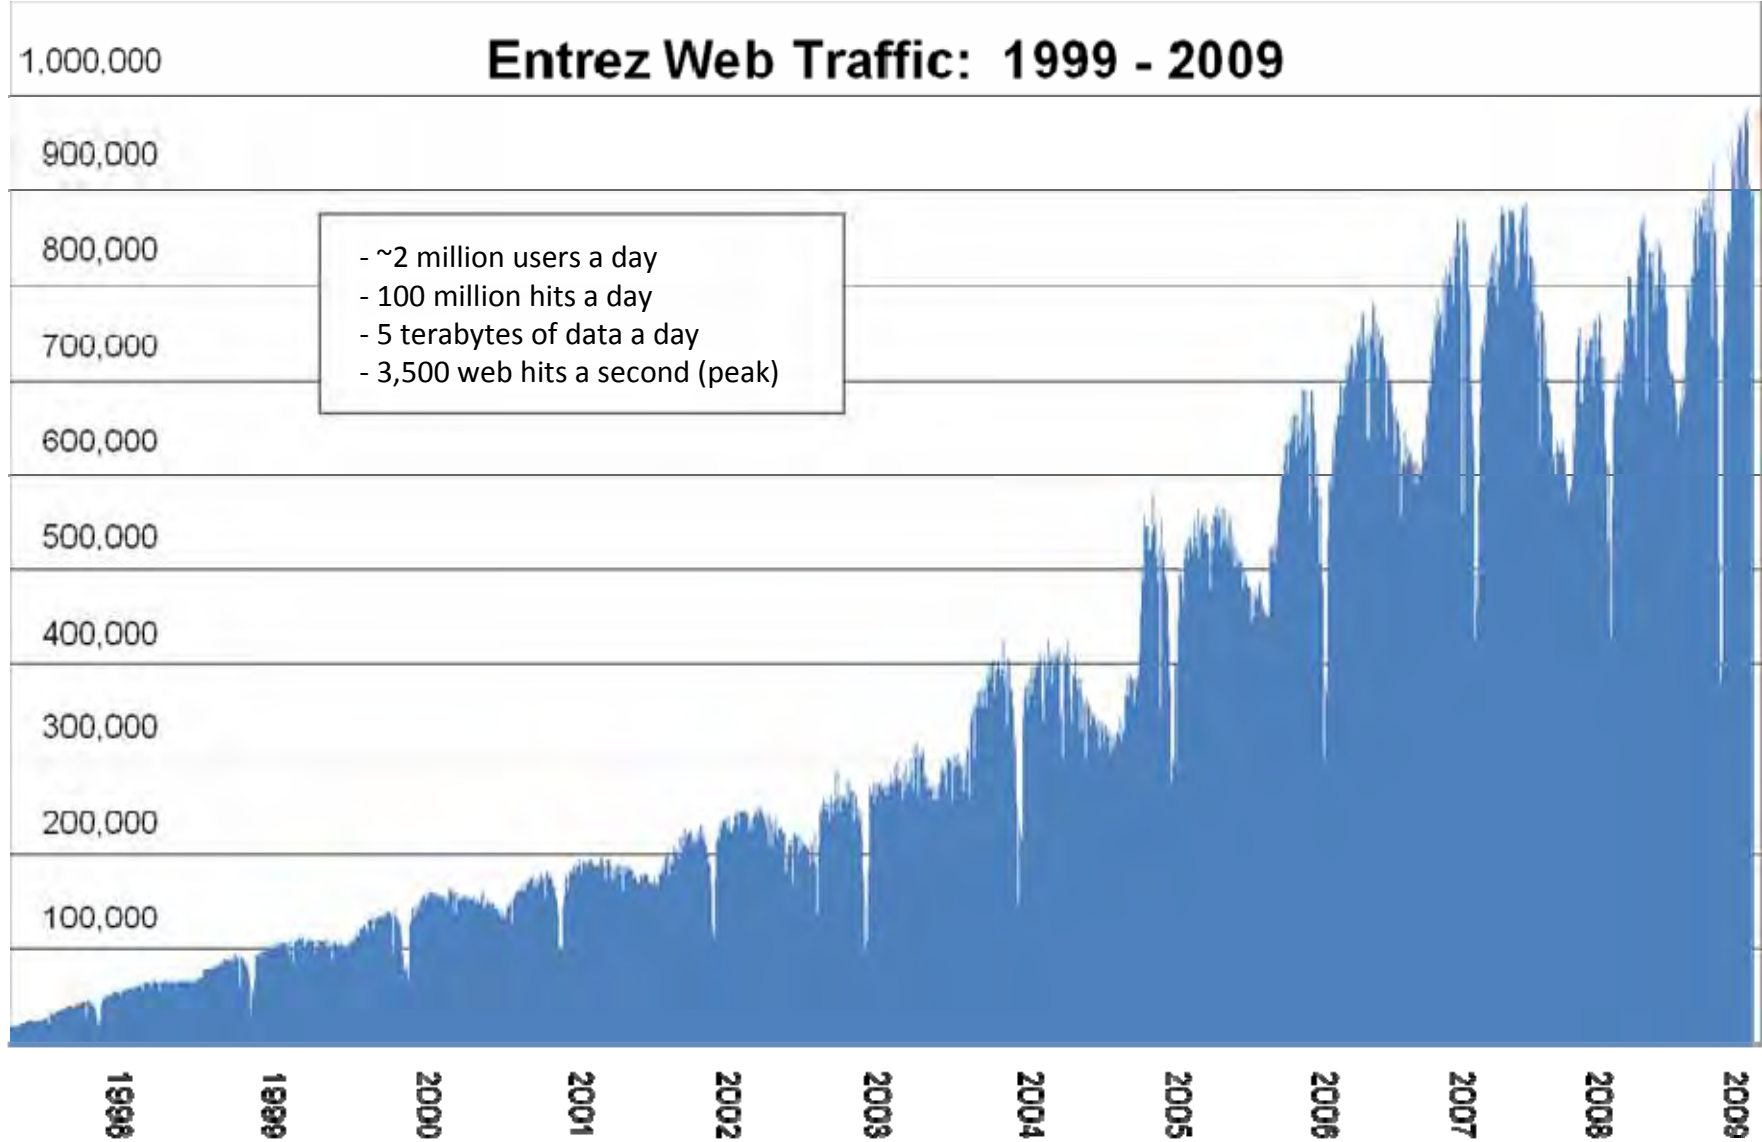

There is no cost for participation in the conference; however, [pre-registration](#) is required.

We are also trying to collect as much information on the use of the Tag Suite as we can to share at the meeting. Even if you cannot make the conference but would like to share how you are using the Journal Article Tag Suite with the community, please fill out our [User Survey](#).

The Conference Committee

Growth and Cost of Sequence Data

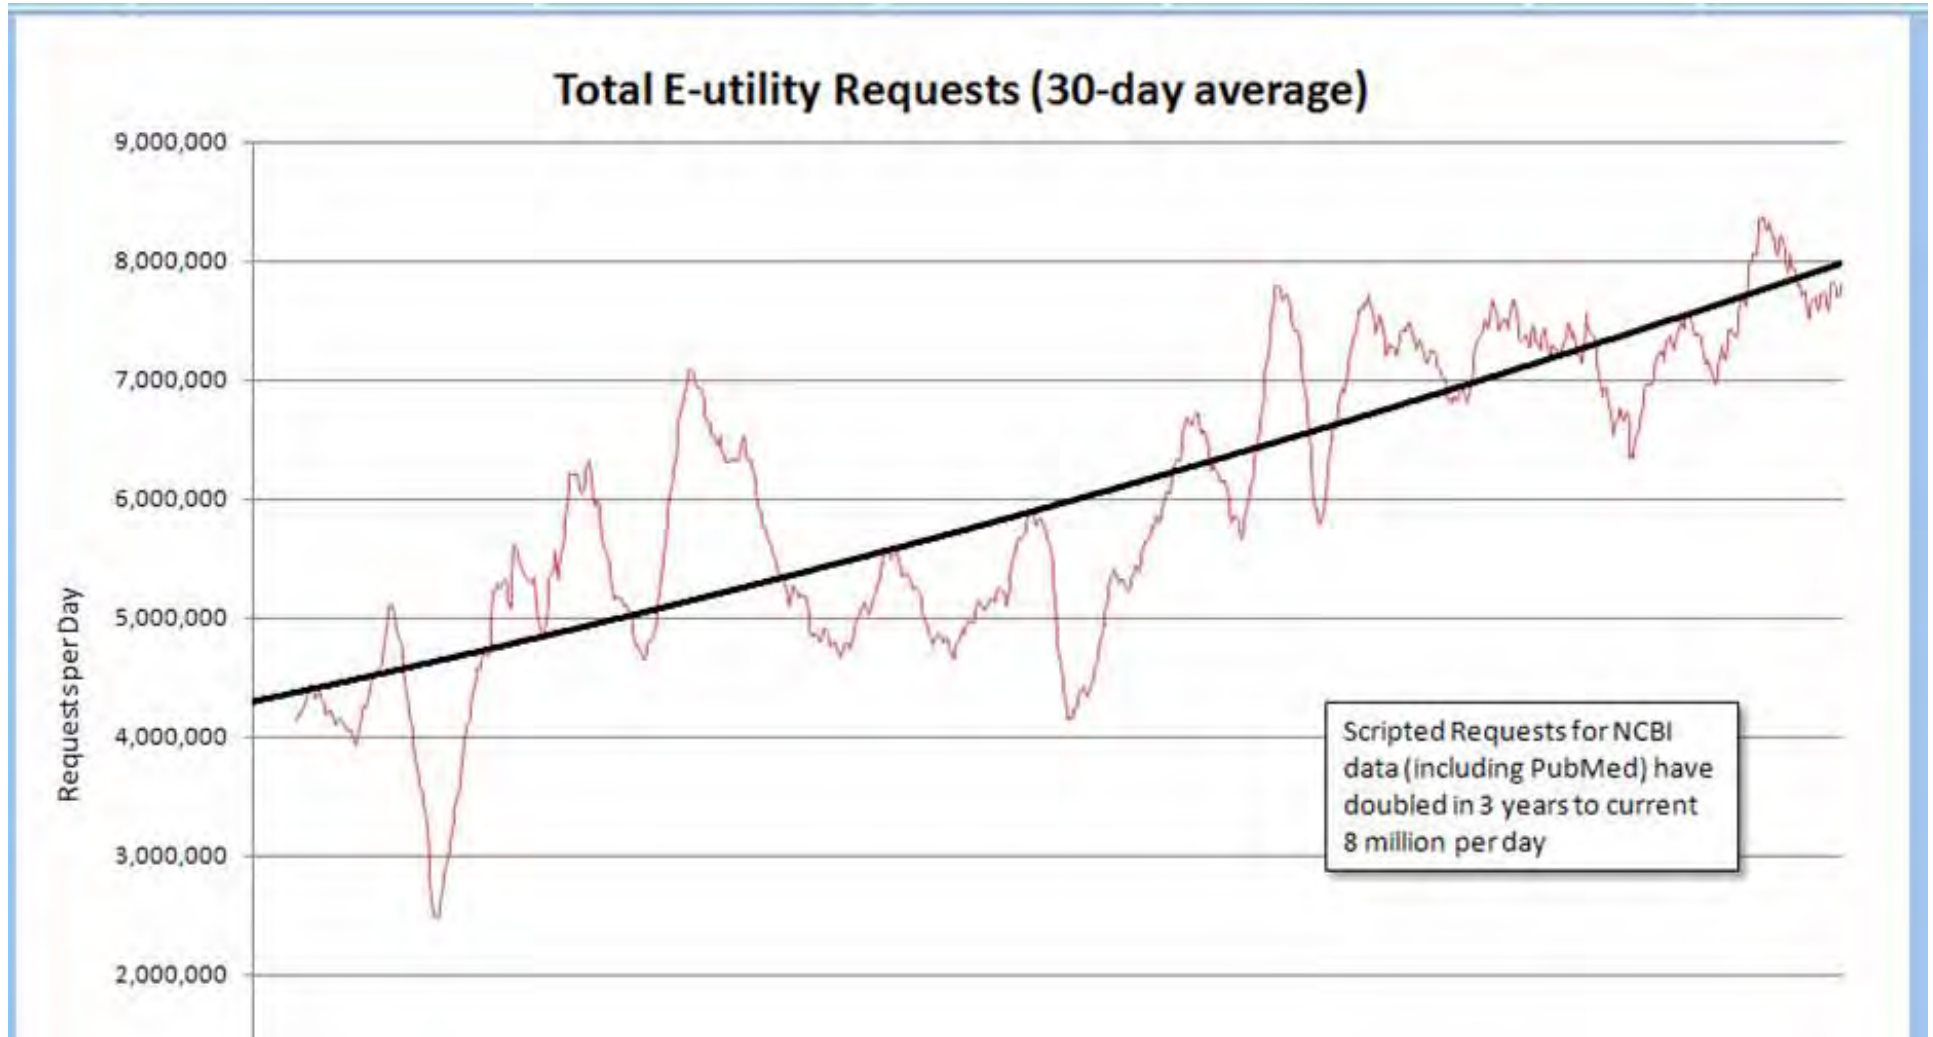

Many Non-NLM Apps (mobile & otherwise) Use NLM databases

such as PubMed, PubMed Central, ClinicalTrials.gov, Genetic databases, drug information (Pillbox, DailyMed, etc.) UMLS resources, etc.

NLM has long history of promoting use of its data in outside apps, products, and systems (e.g., in commercial CD-ROM products in 1980s)

API Access now = 40% of Entrez Use

**NLM APIs**

An Application Programming Interface (API) is a set of routines that an application uses to request and carry out lower-level services performed by a computer's operating system. For computers running a graphical user interface, an API manages an application's windows, icons, menus, and dialog boxes.

We invite you to develop computer and mobile applications for National Library of Medicine (NLM) resources. We encourage comments and recommendations for further API development to [NLM customer service](#). Supported NLM APIs are listed below.

NLM Resources with Application Programming Interfaces (APIs)

API Documentation	Web Interface	API Description
Basic Local Alignment Search Tool (BLAST)		API for Basic Local Alignment Search Tool (BLAST) services which find regions of local similarity between sequences. The program compares nucleotide or protein sequences to sequence databases and calculates the statistical significance of matches.
ClinicalTrials.gov		Method for creating links to ClinicalTrials.gov or downloading ClinicalTrials.gov data in XML format. Obtain information including a trial's purpose, who may participate, locations, and phone numbers for more details about clinical trials being conducted throughout the United States and in many countries throughout the world.

NLM Mobile Websites – to accommodate device diversity, e.g.,

The National Library of Medicine's New API Portal

Posted September 21, 2010 | Todd Park

"As we work to make data available through Open Government and data.gov, HHS is also enabling new applications of data to be put to use for many purposes to affect many aspects of health. The NLM API portal is an important step in that direction."

ARRA HITECH Enabling Structures

American Recovery & Revitalization Act (ARRA) (2/09)
Health IT for Economic & Clinical Health(HITECH)
establishes/funds (*among many other things*)

- Incentives for Medicare/Medicaid providers to implement and demonstrate “meaningful use” of “certified” electronic health records (EHRs)
 - Incentives begin - 2011
 - Non-use penalties begin – 2016

“Meaningful Use” Implementation

The Fine Print

- Centers for Medicare and Medicaid Services (CMS)
 - Eligibility, payment procedures, & phase 1 “meaningful use” criteria (*Final Rule 7/10*)
- Office of the National Coordinator for Health Information Technology (ONC)
 - Standards, implementation specifications & criteria for certification of EHRs, aligned with initial “meaningful use” criteria (*Final Rule 7/10*)
 - Interim certification program (*Final Rule 6/10*) & designation of interim certification bodies (8/10)
- National Institute of Standards and Technology (NIST)
 - Test procedures to be used in interim certification of EHRs (8/10)

“Meaningful Use” Basics

- Slightly different criteria for Eligible Professionals/Hospitals, Medicare/Medicaid
- Requirements planned to escalate: 2011, 2013, 2015
- 2011 Criteria: Core (Mandatory) & **Menu (Up to 5 may be deferred)*
- Requirements in multiple areas:
 - Patient data capture & Orders for drugs, procedures, etc.
 - Exchange of patient data between providers
 - Provision of data & **educational information* to patients
 - Reporting quality measures
 - Privacy/security protections
- *Must* use health data standards to meet some criteria

**change between draft and final CMS rules*

Example 1

2011 Meaningful Use *Menu* Criterion (CMS Rule)

Objective: Use certified EHR technology to identify patient-specific education resources and provide these resources to the patient if appropriate.

Measure: More than 10% of all unique patients seen/admitted are provided patient-specific education resources.

2011 EHR certification criterion (ONC Rule)

Enable a user to electronically identify and provide patient-specific education resources to, at a minimum, the data elements included in the patient's *problem list*, *medication list*, and *laboratory test results*; as well as provide such resources to the patient.

Asthma

Asthma is a chronic disease that affects your airways. Your airways are tubes that carry air in and out of your lungs. If you have asthma, the inside walls of your airways become sore and swollen. That makes them very sensitive, and they may react strongly to things that you are [allergic](#) to or find irritating. When your airways react, they get narrower and your lungs get less air. This can cause wheezing, coughing, chest tightness and trouble breathing, especially early in the morning or at night.

When your asthma symptoms become worse than usual, it's called an asthma attack. In a severe asthma attack, the airways can close so much that your vital organs do not get enough oxygen. People can die from severe asthma attacks.

Asthma is treated with two kinds of medicines: quick-relief medicines to stop asthma symptoms and long-term control medicines to prevent symptoms.

Common Lab Orders LOINC Value Set Version 1.1 Available

last modified 2010-06-30 10:27

Regenstrief Institute is pleased to announce the availability of the Common Lab Orders LOINC Value Set Version 1.1.

Regenstrief Institute is pleased to announce the availability of the [Common Lab Orders LOINC Value Set Version 1.1](#).

This value set was developed by the  Lister Hill Center at the National Library of Medicine, with the help of the Regenstrief Institute and LOINC Committee, many HITSP participants, and the ACLA. This version contains 292 laboratory test and test panel codes and includes some of the terms (such as urinalyses and blood counts) from the November beta release that were withheld from the Version 1 release for additional discussion. There are still about 61 terms from the November beta release that are currently under

RxNorm: Expanded content (6/10)

NLM Adds Veterans Health Administration Drug Terminology, NDF-RT, to RxNorm

New Resource Will Enhance Exchange of Drug Information among Computerized Systems

Effective with the RxNorm release on Monday, June 7th, the National Library of Medicine (NLM), the world's largest medical library and an arm of the National Institutes of Health (NIH), will add the US Department of Veterans Affairs, Veterans Health Administration (VHA) National Drug File-Reference Terminology (NDF-RT) as a source vocabulary in its RxNorm database (<http://www.nlm.nih.gov/research/umls/rxnorm/>). RxNorm is a standardized nomenclature for clinical drugs, produced by NLM, which includes and links many source vocabularies that are commonly used in pharmacy management and electronic medical record systems.

The June release of RxNorm, including NDFRT, is available at http://download.nlm.nih.gov/umls/kss/rxnorm/RxNorm_full_06072010.zip. A UMLS Metathesaurus license is required and can be obtained free of charge from the same site.

NDF-RT is a terminology used to classify drugs according to their clinical properties, including mechanism of action, physiologic effect, therapeutic category, structural class and the established pharmacologic class used by the FDA. It is an extension of the VHA National Drug File (VANDF), another RxNorm source vocabulary. The addition of NDF-RT to RxNorm is a major step towards achieving interoperability of computerized drug information systems.

Year	Number of queries

RxNorm Access

RxNav

A Semantic Navigation Tool for Clinical Drugs

Lister Hill National Center for
Biomedical Communications

[Launch the RxNorm Navigator](#)

Introduction

RxNav is a browser for RxNorm, the NLM repository of standard names for clinical drugs. RxNav displays links from clinical drugs, both branded and generic, to their active ingredients, drug components and related brand names. RxNorm is one of a suite of designated standards for use in U.S. Federal Government systems for the electronic exchange of clinical health information.

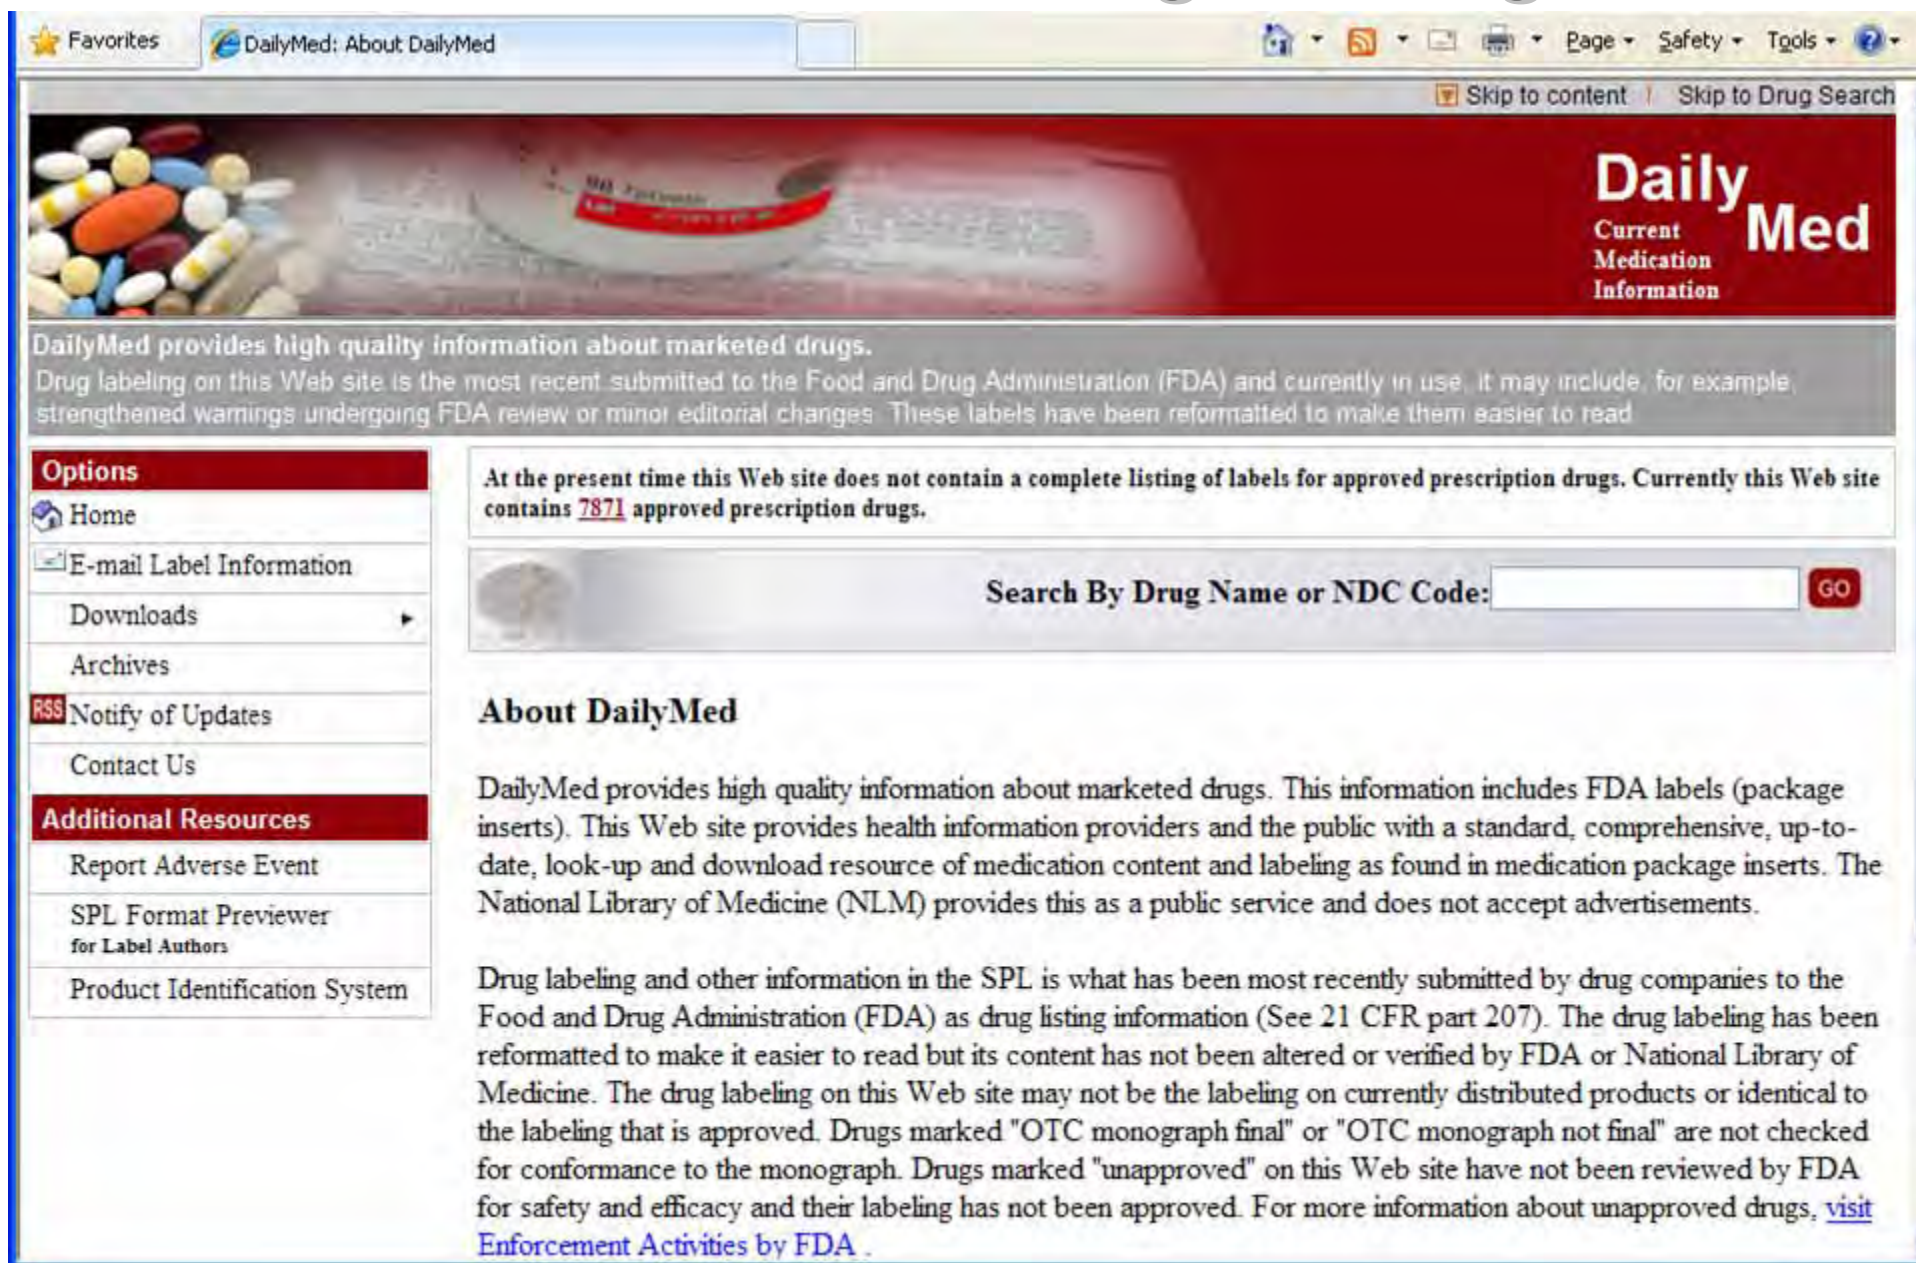

API Users: A RESTful Web API is now available for RxNorm data. See the [User's Guide](#) for more details.

- ▣ [RxNorm API](#) (updated 9/07/2010)
- ▣ [RxNav new features](#) (updated 9/07/2010)
- ▣ [Publications](#)
- ▣ [More information on RxNorm](#)

Starting RxNav

To start RxNav, click on "Launch the RxNorm Navigator" if the link is present; Otherwise, click on "Download and install the latest JRE and the RxNorm Navigator". You will arrive at [the Sun download homepage](#), browse to find the JRE download link, and install it. Then return to this RxNav home page, where the link now should read "Launch the RxNorm Navigator" and RxNav installation will be automatically launched. During installation, you can elect to have the shortcut on your desktop.

Over the counter drugs coming...

The screenshot shows the DailyMed website in a web browser. The browser's address bar displays "DailyMed: About DailyMed". The website's header features a red banner with the "Daily Med" logo and the text "Current Medication Information". Below the banner, a grey box contains the text: "DailyMed provides high quality information about marketed drugs. Drug labeling on this Web site is the most recent submitted to the Food and Drug Administration (FDA) and currently in use. It may include, for example, strengthened warnings undergoing FDA review or minor editorial changes. These labels have been reformatted to make them easier to read."

On the left side, there is a navigation menu with the following items:

- Options**
 - Home
 - E-mail Label Information
 - Downloads
 - Archives
 - RSS** Notify of Updates
 - Contact Us
- Additional Resources**
 - Report Adverse Event
 - SPL Format Previewer for Label Authors
 - Product Identification System

The main content area includes a search bar with the text "Search By Drug Name or NDC Code:" and a "GO" button. Below the search bar, the "About DailyMed" section is displayed, containing the following text:

At the present time this Web site does not contain a complete listing of labels for approved prescription drugs. Currently this Web site contains **7871** approved prescription drugs.

About DailyMed

DailyMed provides high quality information about marketed drugs. This information includes FDA labels (package inserts). This Web site provides health information providers and the public with a standard, comprehensive, up-to-date, look-up and download resource of medication content and labeling as found in medication package inserts. The National Library of Medicine (NLM) provides this as a public service and does not accept advertisements.

Drug labeling and other information in the SPL is what has been most recently submitted by drug companies to the Food and Drug Administration (FDA) as drug listing information (See 21 CFR part 207). The drug labeling has been reformatted to make it easier to read but its content has not been altered or verified by FDA or National Library of Medicine. The drug labeling on this Web site may not be the labeling on currently distributed products or identical to the labeling that is approved. Drugs marked "OTC monograph final" or "OTC monograph not final" are not checked for conformance to the monograph. Drugs marked "unapproved" on this Web site have not been reviewed by FDA for safety and efficacy and their labeling has not been approved. For more information about unapproved drugs, [visit Enforcement Activities by FDA](#).

Newborn Screening Coding and Terminology Guide

Data Standards for Electronic Reporting

[Home](#) [Views](#) [Downloads](#) [HL7](#) [Resources](#) [Code Standards](#) [About](#) [Contact Us](#)

The goal of the Newborn Screening Coding and Terminology Guide is to promote and facilitate the use of electronic health data standards in recording and transmitting newborn screening test results. The Web site includes standard codes and terminology for newborn tests and the conditions for which they screen, and links to other related sites. The codes and vocabulary standards are provided in a series of tables that you can view on the Web and/or download for your own use. These tables cover conditions recommended for screening by the Advisory Committee on Heritable Disorders in Newborns and Children (ACHDNC) or by a state within the U.S.

Use of these standards can speed the delivery of newborn screening reports, facilitate the care and follow-up of infants with positive test results, enable the use (and comparison) of data from different laboratories, and support the development of strategies for improving the newborn screening process.

This website also includes [draft guidance for creating an HL7 version 2.x message using these codes](#) with examples. If you would like us to notify you about updates to this guidance and other new content, please [subscribe to the NBS-Announcements](#) e-mail list from the U.S. National Library of Medicine.

You can reach these various resources by picking a choice below.

Views: Generate customized Web views from the tables of conditions and analytes/measurements maintained by the U.S. National Library of Medicine (NLM®).

- **Conditions** — Conditions that are targeted by newborn screening
- **Analytes/Measurements** — Tests that are used as markers for newborn screening conditions
- **Tailored Views** — Specify subsets, or see relationships between conditions and analytes/measurements

Downloads: Download the tables of newborn screening conditions, of markers for these conditions and/or of mappings between conditions and their markers.

Curriculum Development Centers Program

The purpose of the Curriculum Development Centers Program, one component of the Workforce Program, is to provide funding to institutions of higher education (or consortia thereof) to support health information technology curriculum development. The materials developed under this program will be used by the member colleges of the regional Community College Consortia as well as be available to institutions of higher education across the country.

In April 2010, ONC awarded \$10 million in grants to five domestic institutions of higher education to develop curriculum and instructional materials to enhance workforce training programs primarily at the community college level. One of the awardees under this program, Oregon Health & Science University, will receive additional funding to serve as the National Training and Dissemination Center (NTDC) that will host an in-person training event for community college faculty, establish a secure electronic site from which all materials may be downloaded, collect feedback from instructors and students, and coordinate subsequent revisions of the curriculum materials.

Curriculum Development Centers Program Awardees:

- | | |
|---------------------------------------|---|
| • Oregon Health & Science University | \$2,720,000 (includes \$900,000 for NTDC) |
| • University of Alabama at Birmingham | \$1,820,000 |
| • Johns Hopkins University | \$1,820,000 |
| • Columbia University | \$1,820,000 |
| • Duke University | \$1,820,000 |

Feature

New Regional Extension Centers

The selection of two new [Regional Extension Centers \(RECs\)](#) and expanded coverage for two more RECs completes coverage for all areas of the country.

Meaningful Use of Electronic Health Records

Opportunities

- You could help your institution:
 - Keep track of all the announcements, follow what is happening in advisory committees
 - Analyze 2011 requirements & availability of data and EHR capabilities to meet them
 - Refocus quality improvement efforts; find best practice evidence
 - Connect knowledge resources to EHRs
 - Implement standard vocabularies in EHRs –focus on frequently occurring items
 - Think about what broader availability of EHRs can lead to – *for research, education, health care, public health, information delivery*
- You could help Regional Extension Centers (RECs)
 - Increase awareness of relevant resources/tools
 - Educate/train clinician practices/clinics
 - Network with colleagues who are working with RECs
- You could help teach/take advantage of HITECH offerings in local colleges

Health Information Technology and Health Data Standards at NLM

[Printer-friendly Version](#)

NLM is the central coordinating body for clinical terminology standards within the Department of Health and Human Services (HHS). NLM works closely with the Office of the National Coordinator for Health Information Technology (ONC) to ensure NLM's efforts are aligned with the goal of the President and HHS Secretary for the nationwide implementation of an interoperable health information technology infrastructure to improve the quality and efficiency of health care.

Health Data Standards

NLM supports the development, enhancement, and distribution of clinically specific vocabularies to facilitate the exchange of clinical data and improve retrieval of health information.

- Clinical Vocabularies supported, licensed, or developed by NLM:
[SNOMED CT](#) | [LOINC](#) | [RxNorm](#)
- Uniform distribution mechanism for HIPAA and clinical vocabulary standards through the [UMLS Metathesaurus](#)
- SNOMED CT Subsets:
 - [CORE Problem List Subset of SNOMED CT](#)
 - [UMLS Enhanced VA/KP Problem List Subset of SNOMED CT](#)

NLM distributes FDA approved Structured Product Labels linked to RxNorm and related medication information:

- [DailyMed](#)

NLM coordinates efforts to develop [mappings](#) between HIPAA code sets and standard clinical vocabularies.

- [SNOMED CT to ICD-9-CM](#) | [SNOMED CT to CPT](#) | [LOINC to CPT](#)

- Meaningful Use of Electronic Health Records
- Funded & Regulated Research/Researchers
- Community Benefit

* More information and data available, but ALSO more required to be submitted and/or released

NPRM in Development: FDAAA clinical trials reporting

A service of the U.S. National Institutes of Health

[Home](#) [Search](#) [Study Topics](#) [Glossary](#)

ClinicalTrials.gov is a registry of federally and privately supported clinical trials conducted in the United States and around the world. ClinicalTrials.gov gives you information about a trial's purpose, who may participate, locations, and phone numbers for more details. This information should be used in conjunction with advice from health care professionals. [Read more...](#)

► [Search for Clinical Trials](#)

Find trials for a specific medical condition or other criteria in the ClinicalTrials.gov registry. ClinicalTrials.gov currently has **96,737 trials** with locations in **174 countries**.

► [Investigator Instructions](#)

Get instructions for clinical trial investigators/sponsors about how to register trials in ClinicalTrials.gov. Learn about mandatory registration and results reporting requirements and US Public Law 110-85 (FDAAA).

► [Background Information](#)

Learn about clinical trials and how to use ClinicalTrials.gov, or access other consumer health information from the US National Institutes of Health.

FDAAA Clinical Trials Reporting NPRM

- Scope
 - Clarify statutory requirements for registration and basic results reporting
 - Address possible expansion of results reporting requirements, e.g.,
 - Unapproved products
 - Narrative technical and/or lay summaries
 - Submission of protocol documents

An increasingly important source of results data for IRBs & systematic reviews

REPORTS, DATA AND ANALYSES OF NIH RESEARCH ACTIVITIES
To provide NIH stakeholders with quick and easy access to basic information on NIH programs, the N has created a single repository of reports, data, and analyses, along with several tools for searching the database. A common classification scheme based on the traditional NIH budget categories is used to group similar reports. Several different filters can be applied to find information specific to a particular NIH Institute or Center, funding mechanism, or topic of interest.

COMPLIANCE CHECK QUESTIONNAIRE TAX-EXEMPT HOSPITALS

OMB No.
1545-2015

*This questionnaire asks for information about your hospital and how it operates. Answer the questions based on your hospital's **most recently completed tax period**. If additional space is needed, attach additional sheets. Please complete the questionnaire and follow the instructions in the letter for returning the information to us.*

PART I – ORGANIZATION

Name of Hospital:	EIN:	Most Recently Completed Tax Period:

PART II – OPERATIONS

- 1) Please indicate the category below that best described your hospital or the type of service it provided to the majority of admissions. **Check only one box.**

- ☐ General medical and surgical
- ☐ Hospital unit of an institution (*prison, college etc*)
- ☐ Hospital unit within an institution for the mentally retarded
- ☐ Surgical
- ☐ Psychiatric
- ☐ Tuberculosis and other respiratory diseases
- ☐ Cancer
- ☐ Heart
- ☐ Alcoholism and other chemical dependency
- ☐ Organization is not a §501(c)(3) hospital. If you checked

- ☐ Obstetrics and gynecology
- ☐ Eye, ear, nose and throat
- ☐ Rehabilitation
- ☐ Orthopedic
- ☐ Chronic disease
- ☐ Institution for the mentally retarded
- ☐ Acute long-term care
- ☐ Other — Specify:

The IRS – a new friend of librarians in non-profit hospitals...
